

Carriage Roller

Carriage Rollers - Carriage rollers are specially designed bearings that are utilized on lift masts to be able to help them work in challenging environmental conditions. Lift masts are normally subjected to oscillations, shocks, high dynamic and vibrations and static loads. This equipment is frequently exposed to environmental influences such as dust, cold, heat, aggressive ambient air, moisture and contamination. Hence, the lift masts' guidance arrangements must be specifically strong and have a particular high load carrying capability.

Carriage rollers have been created as the solution for functioning in different environmental surroundings. These bearings are the answer where the guidance arrangements of the lift masts have to be cost-effective and maintain operational security while having the ability to deal with a particularly high load carrying capacity.
